

ABSTRACT OF THE DISCLOSURE

5 A knob assembly for use with cooking utensils, which includes a hand
graspable metallic knob, a metallic bezel for the knob, a first heat insulating
separator between the knob and the bezel and a second heat insulating separator
between the bezel and the cooking utensil to which the knob assembly is to be
attached. The double heat insulators prevent the conduction, as well as radiation of
heat, from the hot surface of the cooking utensil to the bezel and from the bezel to
10 the metallic knob. When the assembly is tightened together, only the metallic knob
and the bezel are visible and accessible, allowing for easier cleaning of the knob and
for maintaining improved hygienic conditions.
